- .2 The minimum average *parcel size* is equal to the *minimum parcel size* for the designated zoning.

8.4 Minimum Servicing Requirements for New Parcels

- .1 If a provision in this Bylaw establishes a minimum parcel size of less than 1.0 ha for a new parcel to be created by subdivision, that minimum parcel size only applies to a new parcel that will be connected to a community water system and a community sewer system.

8.5 Panhandle Parcels

- .1 When a *parcel* is to be in the form of a *panhandle*, the access strip or *panhandle* shall not be included in the calculation of the area of the *parcel* for the purpose of determining compliance with a minimum *parcel* area requirement of this bylaw.
- .2 Despite the minimum *parcel width* provisions for subdivision of this Bylaw, a *panhandle* lot may be created provided that the minimum *parcel width* of the panhandle is 8.0 metres and the maximum length of the panhandle is 20.0 metres.
- .3 When a parcel is to be in the form of a *panhandle*, the minimum *parcel width* requirement shall be calculated for the width of the parcel fronting on the extension of the *panhandle*.
- .4 No more than two (2) *panhandle parcels* may be created where the *panhandles* abut each other.

8.6 Hooked Parcels

- .1 The subdivision of land to create a *hooked parcel* is prohibited.

9.0 FLOODPLAIN REGULATIONS

9.1 Floodplain Designation and Flood Construction Level

- .1 The following land is designated as a *floodplain*:

9.2 Siting Buildings and Structures in Floodplains

Despite any other provisions of this Bylaw, no *building* or *structure* shall be located within:

- .1 7.5 metres of the *natural boundary* of any lake, pond or marsh, or the top of bank where the bank is within 7.5 metres of the *natural boundary* of any lake, pond or marsh.

9.3 Floodplain Management Regulations

- .1 No person shall place any structural support for a *habitable area* or fill required to support a *habitable area* on land within a *floodplain setback* area under Section 9.2;
- .2 No person shall construct, reconstruct, move or extend a floor system or pad which supports a *habitable area*, such that the underside of the wooden floor system or the top of the pad or the ground surface on which it is located, is lower than the flood construction levels specified in Section 9.1 except as provided in Sections 9.3.3 and 9.3.4;
- .3 Despite Section 9.3.2, the following *floodplain* management regulations apply:
 - a) For *Dwelling Units* in the Agricultural Land Reserve:

A *dwelling unit* on a parcel that is 8.0 hectares or greater in area and located within the Agricultural Land Reserve (ALR) shall be located with the underside of any wooden floor system, or the top of the pad of any *habitable area*, or in the case of a *manufactured home* the top of the pad or the ground surface on which it is located, no lower than:

 - i) 1.0 metre above the natural ground elevation taken at any point on the perimeter of the *building*; or
 - ii) the flood construction levels specified in Section 9.1, whichever is the lesser.
 - b) For Closed-Sided *Livestock Buildings*:

Closed-sided *livestock buildings* that are not behind *standard dykes* shall be located with the underside of any wooden floor system, or the top of the pad of any *habitable area*, or the ground surface on which it is located, no lower than:

c) For Industrial *Buildings*:

Industrial *buildings*, other than the main electrical power system, must be located with the underside of any wooden floor system or the top of any pad of any *habitable area* or the ground surface on which it is located not lower than the flood construction levels specified in Section 9.1 minus *freeboard*. Main electrical switchgear shall not be lower than the flood construction level.

- .4 The *floodplain* management regulations specified in Section 9.3.3 may be achieved by structural elevation of the *habitable area*, or by placing adequately compacted fill on which any *habitable area* is to be constructed or located, or by a combination of both structural elevation and fill.
- .5 Where fill is used to meet the *floodplain* management regulations specified in Sections 9.3.2 and 9.3.3, the face of the fill slope must be adequately protected against erosion from flood flows, wave action, ice and other debris hazards.
- .6 The following *developments* and uses are excluded from the requirements of the *floodplain* management regulations specified in Sections 9.3.2 and 9.3.3:

- .2 Space for the off-street parking and loading of motor vehicles in respect of a class of a *building* or use under this Bylaw must be provided and maintained in accordance with the regulations of this Section.
- .3 In any Residential zone, no vehicle or equipment having a gross vehicle weight in excess of 4,600 kg shall be parked or stored on a *parcel* unless stored such that the vehicle or equipment is entirely enclosed within a *building*, except a *recreational vehicle* belonging to the owner or occupier of the *principal dwelling unit* on a *parcel*.

10.2 Calculation of Off-Street Vehicle Parking Spaces

- .1 The number of off-street parking and loading spaces for motor vehicles required for any use is calculated according to Tables 10.2.1 & 10.2.2 of this Bylaw.
- .2 In reference to a *building* or use permitted under this Bylaw which is not specifically referred to in Tables 10.2.1 & 10.2.2, the number of off-street parking and loading spaces is calculated on the basis of the requirements for a similar class of *building* or use that is listed in Tables 10.2.1 & 10.2.2.
- .3 Where the calculation of the required off-street parking or loading space results in a fraction, the required number of spaces shall be rounded down to the nearest whole number.
- .4 Where more than one *building* or use is located on a *parcel*, the required number of off-street parking spaces shall be the sum of the requirements for each use, unless otherwise expressly provided for in this Bylaw.
- .5 Where more than one standard may apply to a use, the standard requiring the greatest number of parking spaces shall be used.
- .6 Where the calculation of the required off-street parking or loading space requires a determination of gross floor area, this shall include the floor area of all accessory *buildings* and *structures* (including basements), except where such *buildings* and *structures* are used for parking or mechanical purposes.

10.3 Design Standards for Off-Street Vehicle Parking and Loading Areas

.1 Vehicle Parking Space Standards

- i) All parking areas shall be provided with adequate curbs, or wheel stops in order to retain all vehicles within the parking areas and to ensure that *fences, retaining walls*, landscaping and pedestrian paths as well as any *buildings or structures* are protected.
- ii) All parking areas with four (4) or more parking spaces shall be surfaced with a permanent hard surface of asphalt; concrete; permeable or porous pavement, such as open-jointed pavers, turf or gravel grids or porous concrete or asphalt; interlocking paving stones, or similar hard surface treatment so as to provide a surface that is durable and dust free for the purpose intended.
- iii) All off-street loading spaces shall be clearly marked with the words “Loading space only” on the pavement or an adjoining wall face.
- iv) Parking spaces for a *single detached dwelling* and a *home occupation* may be arranged in tandem such that one space is located behind the other space with a common or shared point of access to a *highway*.

.2 Vehicle Parking Space Dimensions

- i) Dimensions for off-street parking and loading spaces shall satisfy the size requirements in Table 10.3 (Dimensions of Parking and Loading Spaces).

Table 10.3: Dimensions of Parking and Loading Spaces

Standard Parking Space	2.7 m	6.0 m	2.2 m
Parallel Parking Space	2.7 m	7.0 m	2.2 m
<i>Boat Launch</i> Parking Space	3.0 m	9.0 m	2.2 m
Parking Space for Persons with Disabilities	3.7 m	6.0 m	2.75 m

Loading Space	3.0 m	9.0 m	4.0 m

- ii) Where one or both sides of a parking space abut a wall or other barrier more than 0.15 metres high, an additional 0.3 metres width shall be provided to each abutting parking space on the side(s) adjacent to such a barrier.
- iii) An off-street parking area shall be constructed to permit unobstructed access to and egress from each space at all times, except tandem spaces, as permitted at Section 7.2.5.
- iv) Vehicle access to all parking spaces shall be provided by means of unobstructed manoeuvring aisles, each having widths not less than:
 - a) 7.3 metres, where parking spaces are located at 90 degrees to the manoeuvring aisle providing access to the space;
 - b) 5.2 metres, where parking spaces are located at 60 degrees to the manoeuvring aisle providing access to the space; or
 - c) 3.7 metres, where the parking spaces are located at 45 degrees or less to the manoeuvring aisle providing access to the space.
- v) Where parking spaces are located at 60 degrees, or less to the maneuvering aisle, only one-way traffic is permitted in the maneuvering aisle.
- vi) Despite Section 11.3.2(i), the minimum required off-street *parking space* dimensions in Table 10.3 may be reduced for up to 20% of the *parking spaces* to 2.4 metres wide and 5.0 metres long to accommodate small cars, provided that the spaces are clearly identified, grouped and signed for small car use only.

 - c) an easement is registered against the title of the parking parcel in favour of the owner of the *parcel* on which the *building* requiring the parking is located, ensuring that the parking area is available for parking.
- .2 Despite sub-section .1, off-street loading spaces shall be located on the same *parcel* as the *building* or use they serve, but not within a required front or side parcel line setback area or within 7.5 metres of any point where two highways intersect.

10.5 Payment In Lieu of Off-Street Vehicle Parking Spaces

- .1 Where a property is developed within the Town Centre (TC) Zone, a partial or total reduction of on-site parking requirements is permitted if the owner pays \$10,000.00 per *parking space* required but not provided into the Town's collective parking fund.

- .2 Where a change of use occurs within the TC Zone such that Table 10.2.1 requires additional parking spaces to those already provided, a partial or total reduction of on-site parking requirements is permitted if the owner pays \$10,000.00 per parking space required but not provided into the Town's collective parking fund.
- .3 Payment in Lieu of parking is payable at the time when a Building Permit is issued for the building or structure that is being put to the use that requires the parking space specified at Table 10.2.1, or where no Building Permit is required, the use that requires the parking space specified at Table 10.2.1 is granted a business licence.

10.6 Off-Street Vehicle Parking Exemptions

OSOYOOS LAKE

OSOYOOS LAKE

LAKE

OSOYOOS LAKE

OSOYOOS LAKE FLOOD LEVEL
280.7 metres
(G.S.C. Datum)

NOTE :
Wave action and related erosion at high lake levels may present a special flood hazard depending on site specific conditions.

NOTE :
The floodplain limits as shown are within the accuracy of the base mapping. Site specific ground elevations should be confirmed by field survey.

Use and Limitations of Floodplain Maps

- 1. Floodplain maps are derived from base mapping, aerial photography, river surveys and issue of mapping. They are not a guarantee of development in the map area. Subsequent developments or changes within the floodplain (natural or constructed) will affect flood levels and render site-specific map information obsolete.
- 2. Floodplain maps are administrative tools which depict minimum flood elevations and floodplain boundaries. They do not provide information on site-specific flood hazards such as, land erosion or high water velocities, shifts in the channel of the watercourse, or alluvial and debris flow fan areas.
- 3. The presence of levees, roads, railways or other barriers can restrict water flow and affect local flood levels. Obstructions such as ice and debris, flooding in surrounding areas, channel deposition, bank erosion and other phenomena can cause flood levels to exceed those indicated on the map. Land adjacent to the floodplain may be subject to flooding from tributary watercourses.
- 4. Floodplain maps do not indicate or locate legal survey boundaries. A site survey is required to reconcile the map with ground elevations, and designated flood level information.
- 5. The accuracy of the location of a floodplain boundary as shown on this map is limited by the base mapping. It is generally assumed to be plus or minus one-half the increment of the ground contours.
- 6. Professional assistance and detailed engineering analysis are required to address any of the above considerations.

- Use and Limitations of Floodplain Maps**
- Users must note the dates of base mapping, aerial photography, river surveys and issue of mapping relevant to dates of development in the map area. Subsequent developments or changes within the floodplain or channel (natural or constructed) will affect flood levels and render site-specific map information obsolete.
 - Floodplain maps are administrative tools which depict minimum flood elevations and floodplain boundaries. Flooding may occur outside of the designated floodplain boundary.
 - Floodplain maps do not provide information on site-specific flood hazards such as, land erosion or high water velocity, sudden shifts in the channel of the watercourse, or alluvial and debris flow fan areas.
 - Other sources of water, roads, railways or other barriers can restrict water flow and affect local flood levels. As well, obstructions such as ice and debris, flooding in surrounding areas, channel deposition, groundwater or other phenomena can cause flood levels to exceed those indicated on the map. Land adjacent to a floodplain may be subject to flooding from tributary watercourses.
 - Floodplain maps do not indicate or locate legal survey boundaries. A site survey is required to reconcile property location, ground elevations, and designated flood level information.
 - The accuracy of the location of a floodplain boundary as shown on this map is limited by the base topography. It is generally assumed to be plus or minus one-half the increment of the ground contours.
 - Professional assistance and detailed engineering analysis are required to address any of the above considerations.
